Capabilities

There has been a major technological revolution over last 5 years and the most amazing technological innovation in the modern world is "Mobility solutions". In this era of fast-paced technology, workstations are not limited to office premises. Enterprises are going mobile to cope up with the emerging technologies. The mobile devices have evolved from just "Email and data on the go" devices to mobile apps enabled devices that have totally transformed the very fabric of the business operations today. Mobile technology has grown and invaded every sphere of our lives.

### Day to day issues without Mobility

- Users expect same experience for all business applications.
- Executives and Managers demand an intuitive, consolidated, easy to use interface for approving workflows and triggering self services from anywhere.
- Users with approval responsibilities are frequently away from their desk, making it very difficult for them to quickly respond to any requests.
- Need to deliver an improved user experience with low TCO (Total cost of ownership) to drive productivity of employees.
- Need to be able to adapt and extend apps beyond the standard offerings.

Improved UI required not only for Mobile devices but on Desktop as well for a homogeneous experience across a variety of devices.

## Features

### Features of SAP Mobility include:

- Flexible developer license packages for companies of all sizes
- End to end partnership lifecycle management through Mobile Apps Partner Center
- Hosted sandbox and development environment
- Mobile app certification from SAP
- Rich and vibrant developer community access
- Ability to market and sell apps via SAP Store
- Let us talk about the features that make SAP mobile platform more efficient and user friendly:

### Platform offered

**SMP 3.0** - SMP provides you with an open development environment, which enables you to develop mobile applications using familiar environments and languages, open-source tools, and third-party toolkits, libraries, and frameworks.

**SAP Fiori** - Fiori enables applications to be used on desktop computers, tablets and smartphones. SAP Fiori supports HTML5

## Benefits

**Business with no limitations:** Increased productivity has increased the need for all time access of crucial data. This helps businesses in becoming more streamlined and helps to increase their profits.

**Faster Return on Investment:** Organizations globally are increasing their profitability immensely by utilizing this technology for their mobility needs. With logistics out of the way in case of productivity increased and faster ROI.

**Security:** ITOrbital is working towards bringing secure mobile solutions to businesses. By using ITOrbital SAP Mobility solutions, companies can implement device management and application platform management with high levels of security and control.

### Customer Advantage:

- Develop once, deploy everywhere and run on any device - desktop, tablet, Smartphone
- Reduction in cost, complexity and effort through cloud-based offering (zero installation)
- Increase in developer productivity with code templates and SAP best practices
- Improvement in team productivity with the ability to code and collaborate anywhere

## We Provide

- **Comprehensive services:** We take a modular approach to design, development, rollout, testing and support, leveraging industry best practices. Our solutions are secure, scalable and maintainable.
- **Quality check:** We help consumers in assessing the optimum scenarios in which they can have a beneficial business altogether.
- **Development skills:** Our services are painstakingly conceptualized, planned, designed and executed by a team of highly skilled design experts, programmers and project management specialists.
- **Constant improvement:** Our zeal for improvement prompts us to invent robust procedures and methodologies in niche technologies for mobility, e-commerce and real-time analytics.
- **Corporate training:** We are also capable of conducting corporate training for our customers giving them in depth knowledge of the usage of SAP products

## ITOrbital SAP Center of Excellence (CoE)

- Co-operative development
- Quick personnel mobilization to client's location
- Close co-operation in landscape set up for faster UAT
- Post development support and training
