SAP Technical Module Offerings

ABAP and BASIS :

- All SAP R/3 applications and parts of BASIS are developed in ABAP
- ABAP will be used in all types of customization as per user requirements.
- The ABAP programming language unifies the advantages of an object-oriented language
- SAP Basis Implementation ,Upgrade , Migration & Production Support

Benefits

1. **Efficiency** : An ERP system eliminates repetitive processes and greatly reduces the need to manually enter information. The system will also streamline business processes and makes it easier and more efficient for companies to collect data.
2. **Integrated Information** : Instead of having data distributed throughout a number of separate databases, all information is now located in a single location. Data is also kept consistent and up-to-date.
3. **Reporting** : ERP software helps make reporting easier and more customizable. With improved reporting capabilities, your company can respond to complex data requests more easily.

Users can also run their own reports without relying on help from IT.

4. **Customer Service** : It's easier to provide high-quality customer service using an ERP system. Sales and customer service people can interact with customers better and improve relationships with them, through faster, more accurate access to customers' information and history.
5. **Security** : A new system will improve the accuracy, consistency and security of data. Restrictions to data can also be enhanced.
6. **Productivity** : Increases productivity with integrated, quick, and agile business processes.
7. **No barrier** : There are no language and currency barriers. SAP has incorporated many languages including Japanese, German, and English as core languages and plethora of currencies in their arsenal

We Provide

- **Comprehensive services** : We take a modular approach to design, development, rollout, testing and support, leveraging industry best practices. Our solutions are secure, scalable and maintainable.
- **Quality check** : We help consumers in assessing the optimum scenarios in which they can have a beneficial business altogether.
- **Development skills** : Our services are

painstakingly conceptualized, planned, designed and executed by a team of highly skilled design experts, programmers and project management specialists.

- **Constant improvement** : Our zeal for improvement prompts us to invent robust procedures and methodologies in niche technologies for mobility, e-commerce and real-time analytics.
- **Corporate training** : We are also capable of conducting corporate training for our customers giving them in depth knowledge of the usage of SAP products
